5G development

Facing the new digital reality

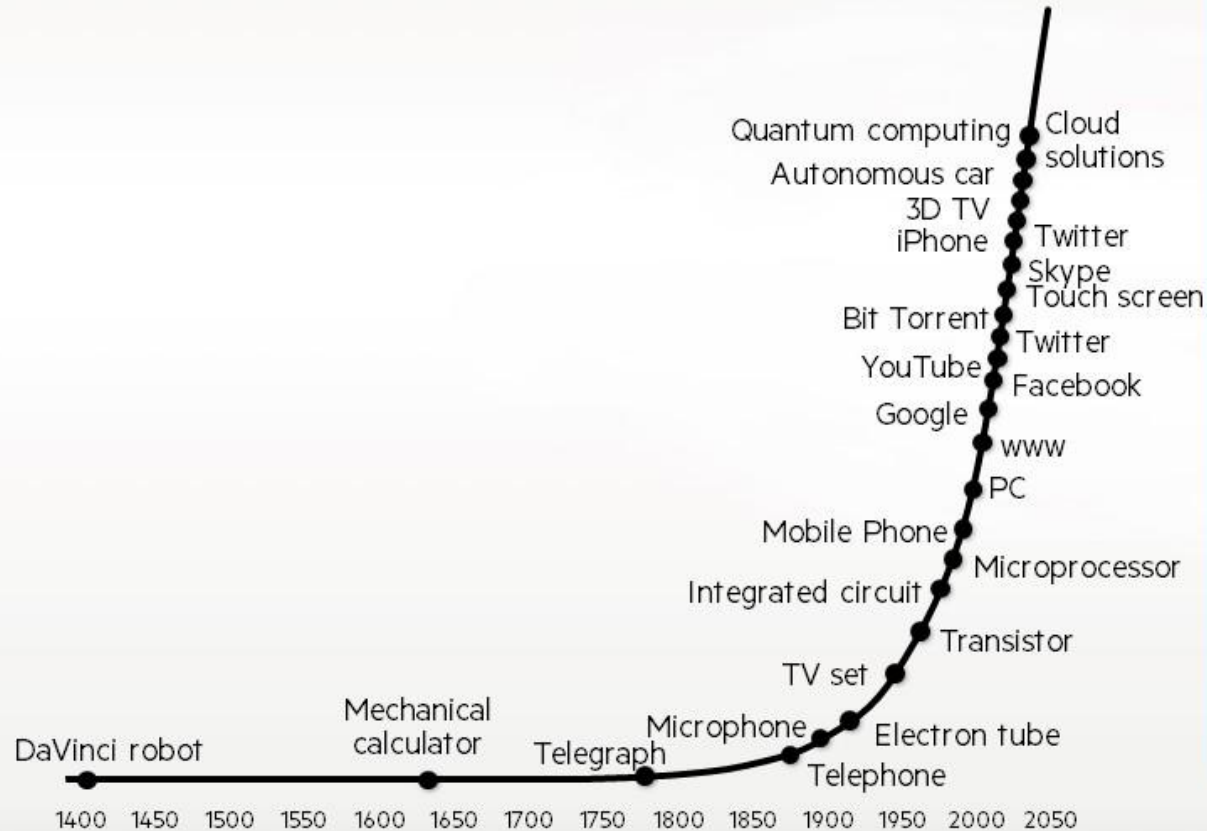

Prof. **Juris Binde**, *Dr.oec*
President of LMT

CHANGE IN THE WORLD WILL NEVER BE AS SLOW AS TODAY

The acceleration of technology development

Today's smartphones have more computing power than NASA used to go to the Moon

Smartphone processor performance (iPhone X – 2.4 GHz) is 60 000 times higher than NASA equipment (Apollo Guidance Computer - 0.04 MHz)

INDUSTRIAL REVOLUTIONS

1.0

Water and steam power is used to create mechanical production facilities

1800

1784 - First mechanical loom

2.0

Electricity lets us create a division of labor and mass production

1900

1870 - First assembly line

3.0

IT systems automate production lines further

2000

1969 - First programmable logic controller

4.0

IoT and cloud technology automate complex tasks

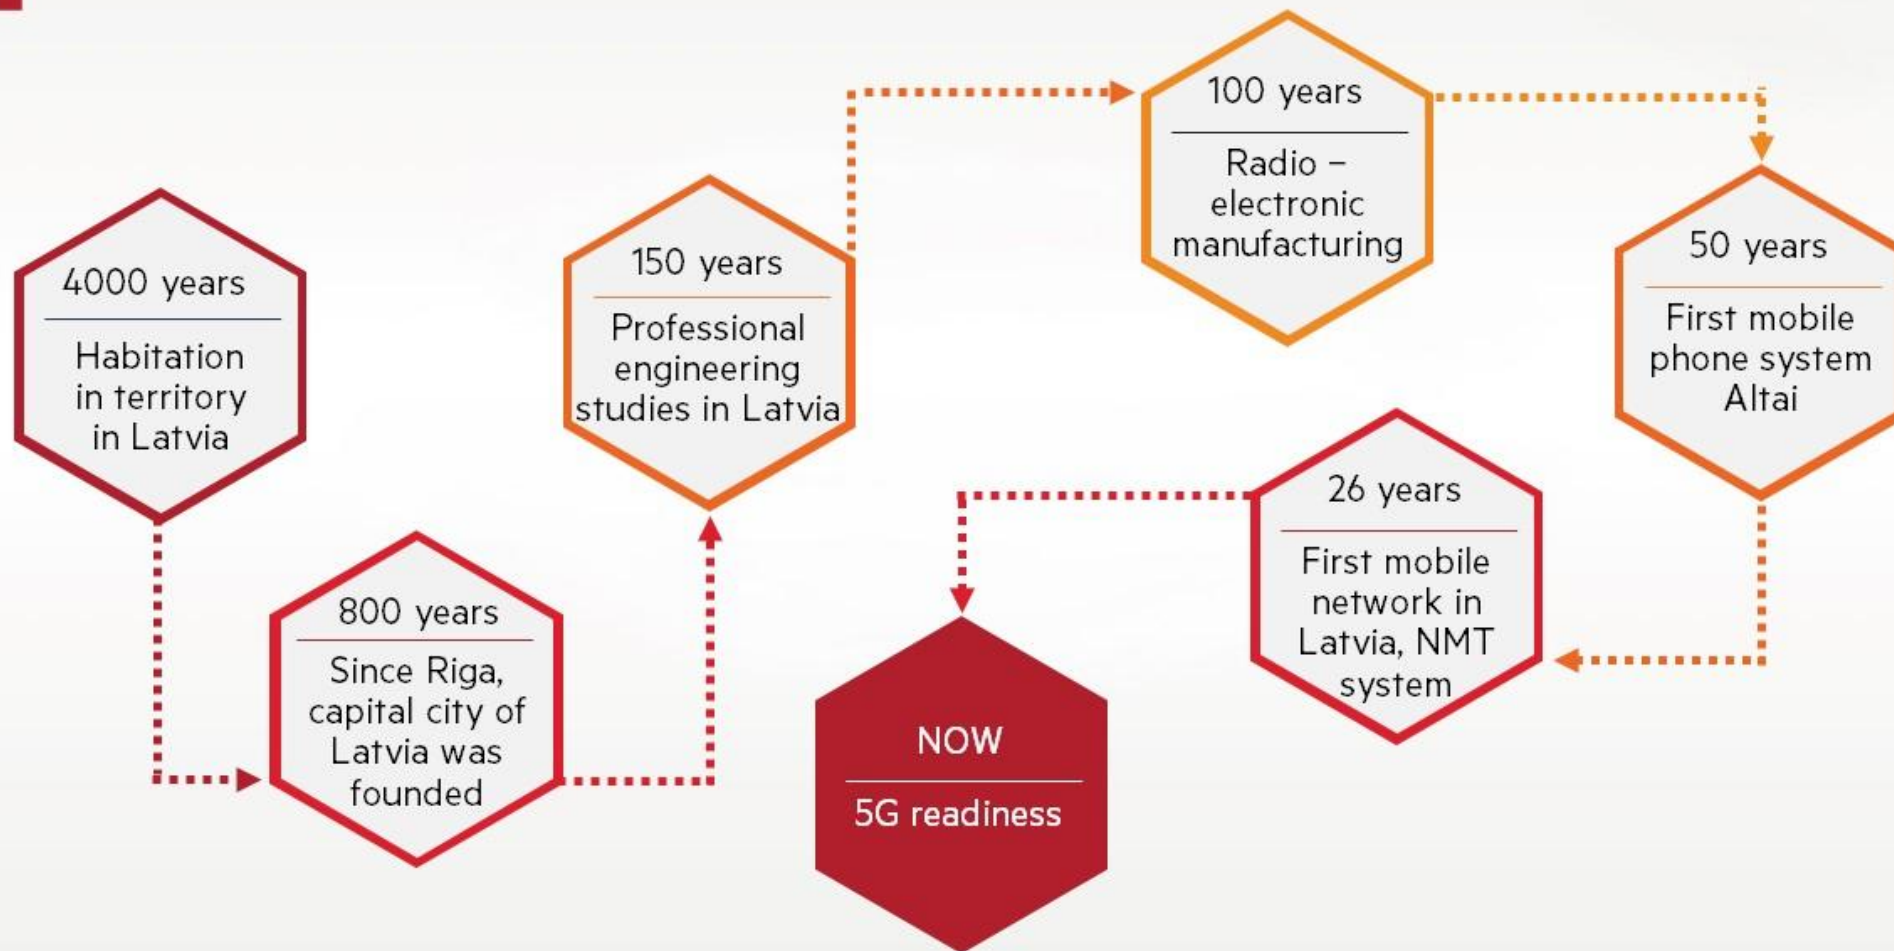

First commercial IoT technologies

SUSTAINED TECHNOLOGY LEGACY FOR 100 YEARS

EVOLUTION OF MOBILE TECHNOLOGY

5G started with trying to define a wide range of applications first and define a very flexible 5G NR numerology to support most of them

1961-Altai

1G *Voice*

2G *Voice, SMS*

3G *Voice, SMS, Internet*

4G *Audio, Video, Apps*

5G

- Audio, Video, Apps, VR (eMBB)*
- Sensors (mMTC)*
- Sensors/Robots (URLLC)*

NARROW BAND
IOT

High data throughput

Low Resource consumption

 OPPORTUNITIES TO ENABLE INNOVATIONS

1

Business Application Layer

Applications and services available directly to consumers and top-level application providers

2

Business Enabler Layer

APIs and interfaces to enable providers to create 5G services

3

Infrastructure Layer

The physical cabling, nodes and base stations that handle communications

5G USE CASES

Enhanced mobile broadband

- Multi-Gbps data rates
- Extreme capacity
- Uniformity
- Deep awareness

Mission-critical services

- Ultra-low latency
- High reliability
- High availability
- Strong security

Massive Internet of Things

- Low cost
- Ultra-low energy
- Deep coverage
- High density

Mobile Devices

Networking

Automotive

Robotics

Health

Wearables

Smart Cities

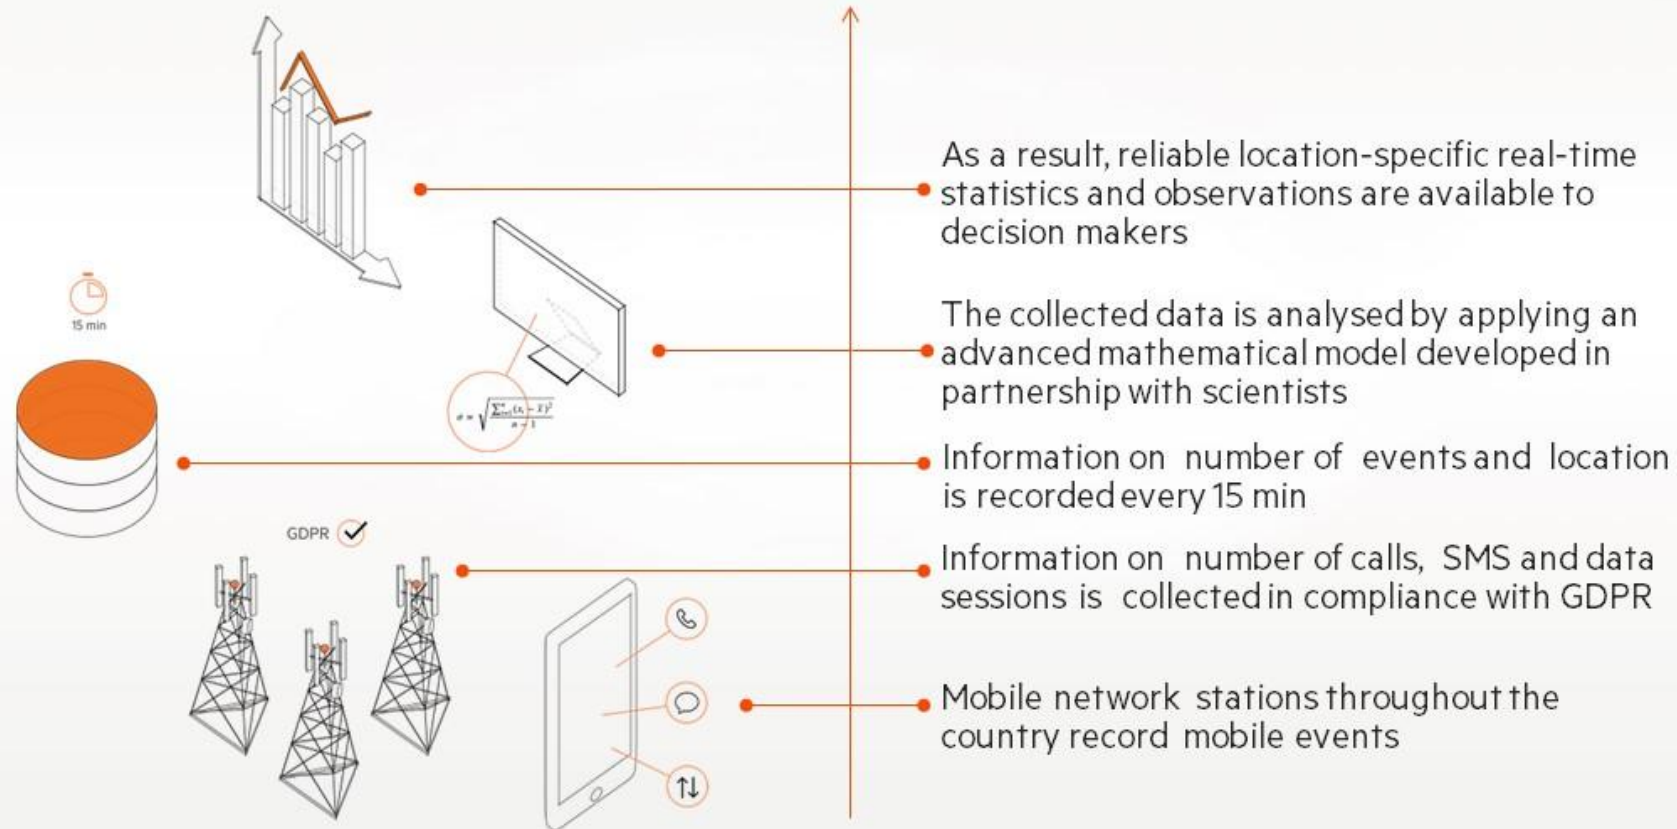

Smart Homes

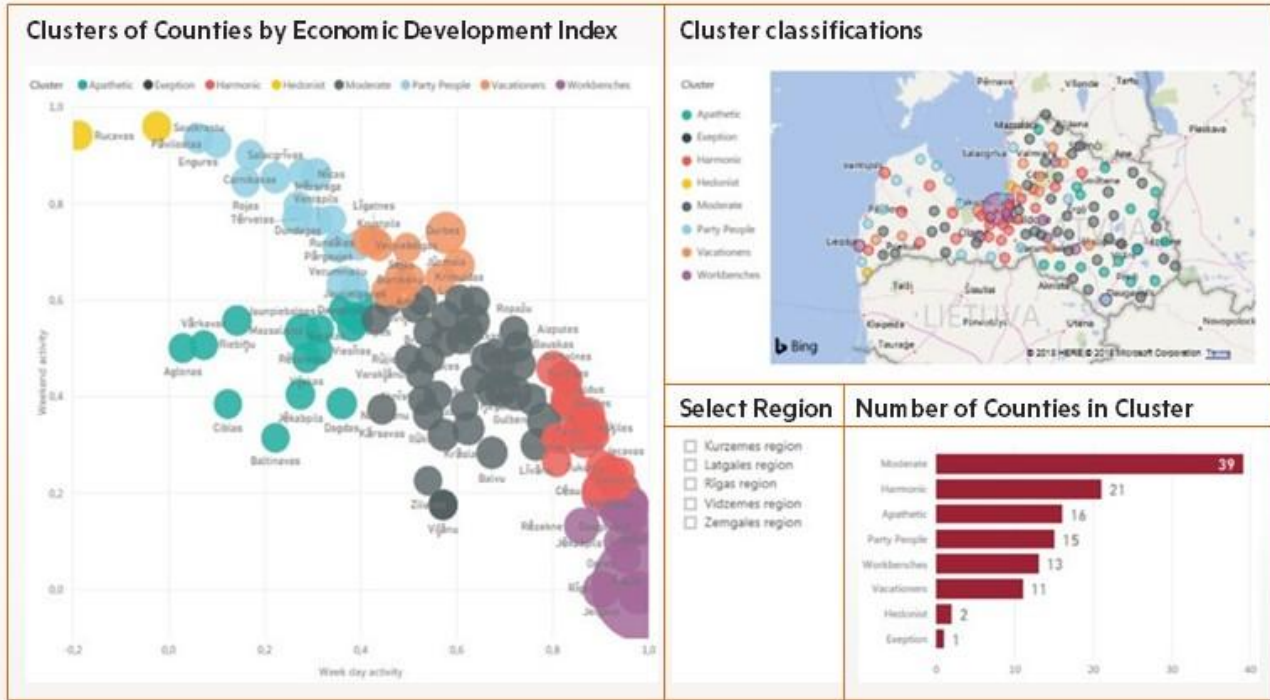

BIG DATA ANALYTICS IN MOBILE NETWORKS

GDPR-compliant data collection

ECONOMIC ACTIVITY ANALYSIS

65 million
calls and SMS

FROM EGO-SYSTEM TO ECO-SYSTEM

Infrastructure focus
Slow time to market
Traditional local sales
channels

Product-centric
Effective and agile innovations
Strong digital channel presence,
cross-border focus

CREATING NEW PARADIGMS AND DEVELOP CONCEPTS

Data mobility

- Voice
- Internet
- Broadband
- Television
- Big data
- Private LTE

People mobility

- **MaaS (Mobility as a Service)**
- Ride sharing
- Car sharing
- Connections between vehicles, infrastructure and pedestrians (V2I2P)

MOBILITY services provider

Things mobility

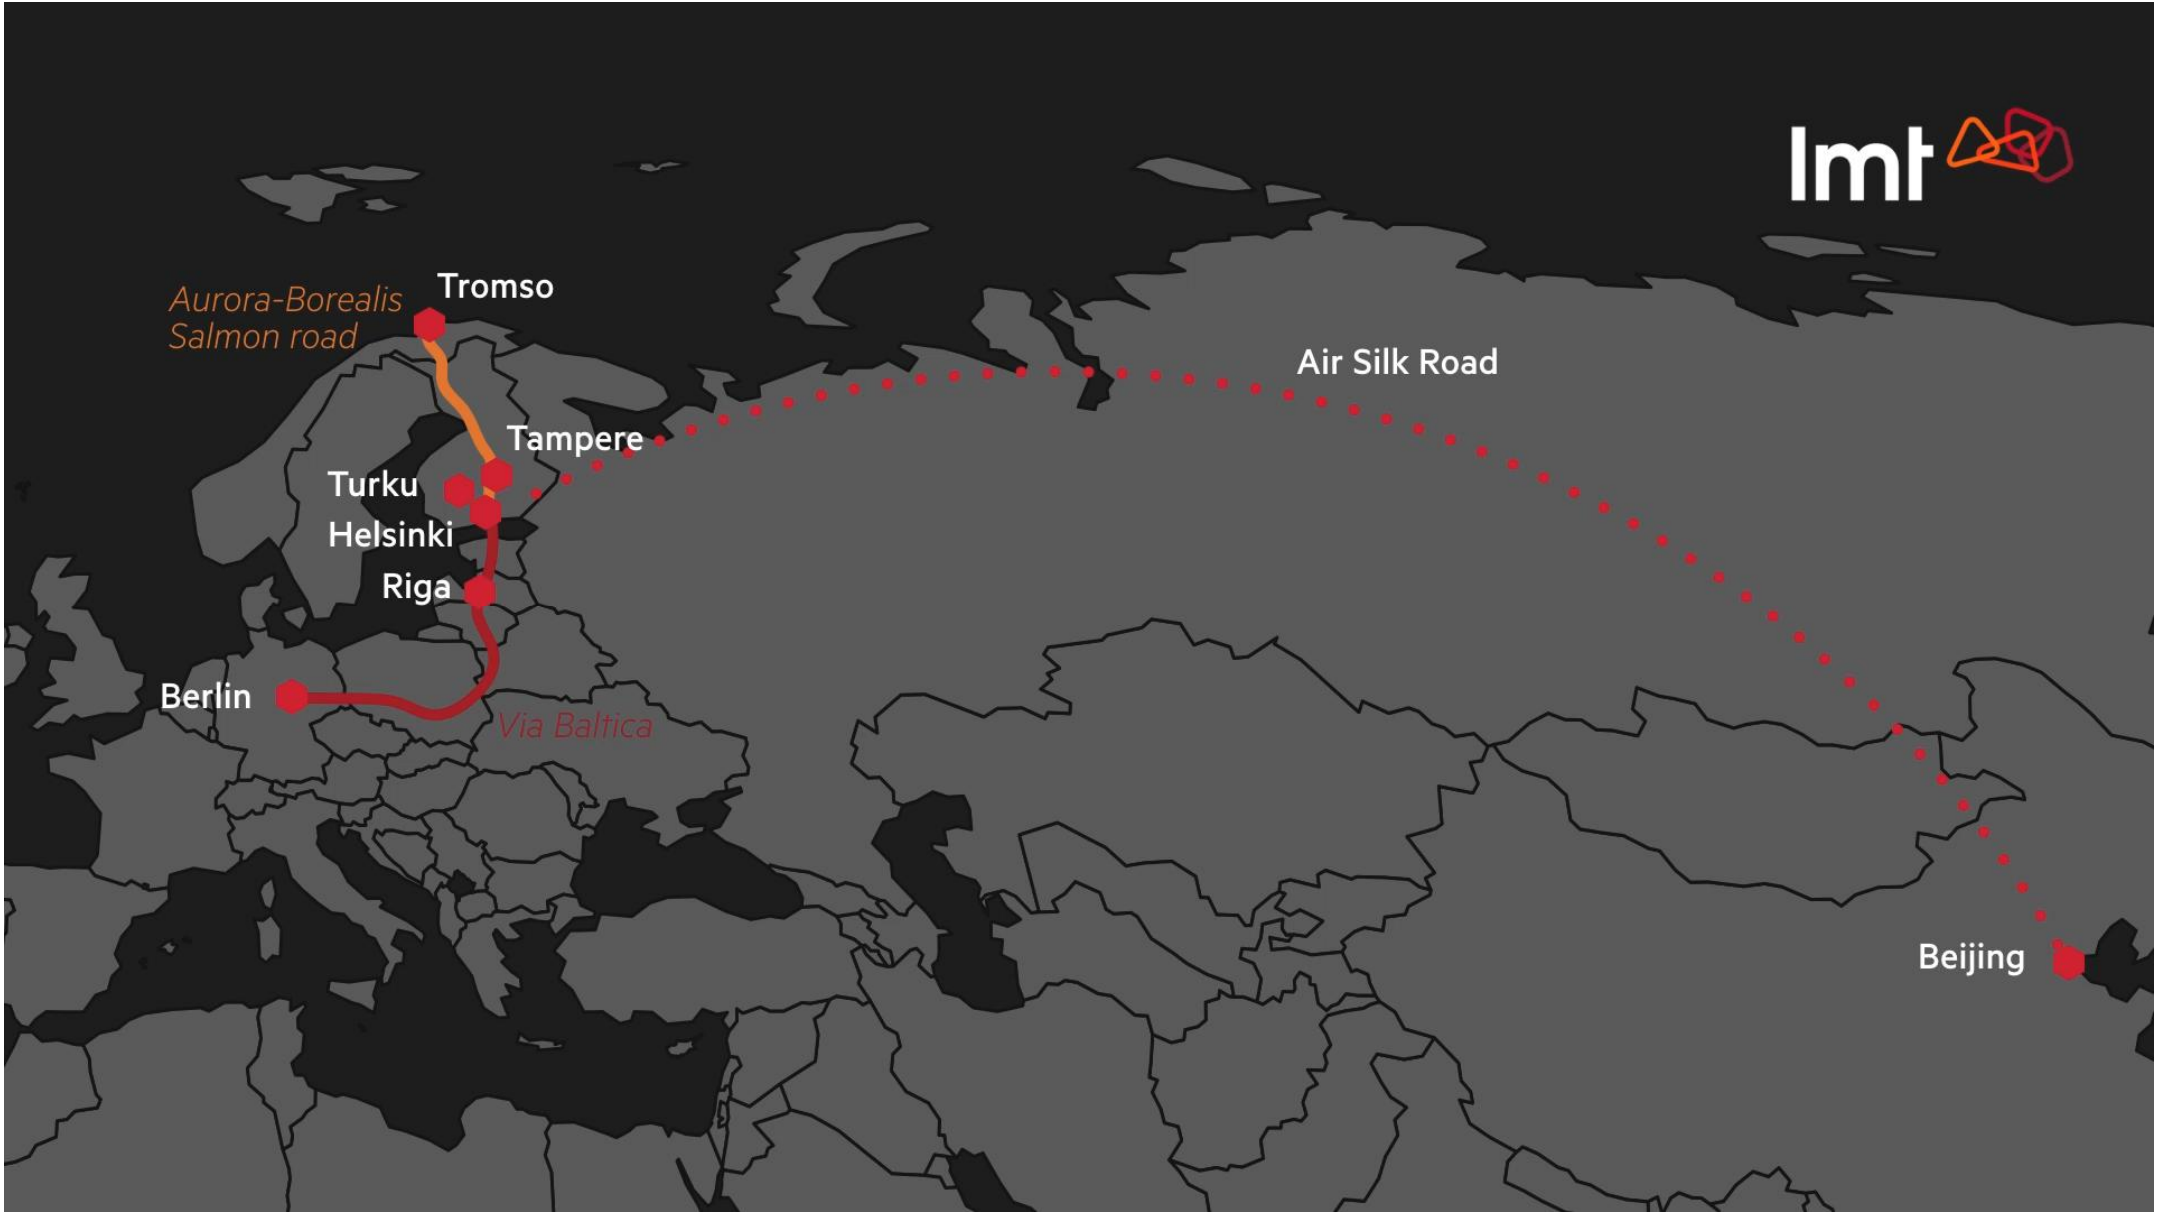

- **CaaS (Corridor as a Service)**
- C-ITS development
- Multimodal, cross-border interoperability
- Tracing & tracking
- Logistics & optimization solution
- Drone as a Service

5G PRIORITY DIRECTIONS OF INNOVATION

- Digital transport systems
- Security and protection solutions
- Unmanned aerial vehicle coordination systems
- Sensors and Big data systems

FUTURE IS MOBILE

GLOBAL MOBILE DATA USAGE (exabytes EB/month)

Ericsson Mobility Report, 2018

SMARTPHONE SHARE Year 2021

of mobile
data traffic

of global
connections

Cisco, 2017

PARADIGM SHIFT

**This is not an era of change
but a change of era**

Jan Rotmans (2014)

DIGITAL DARWINISM

We live in a new era where technology and society are evolving faster than businesses can naturally adapt

It is not the strongest or the most intelligent who will survive but those who can adapt to change the best

CAUSAL vs EFFECTUAL REASONING

Managerial Thinking (Causal)

Distinguishing Characteristic

Selecting between given means to achieve a pre-determined goal

Entrepreneurial Thinking (Effectual)

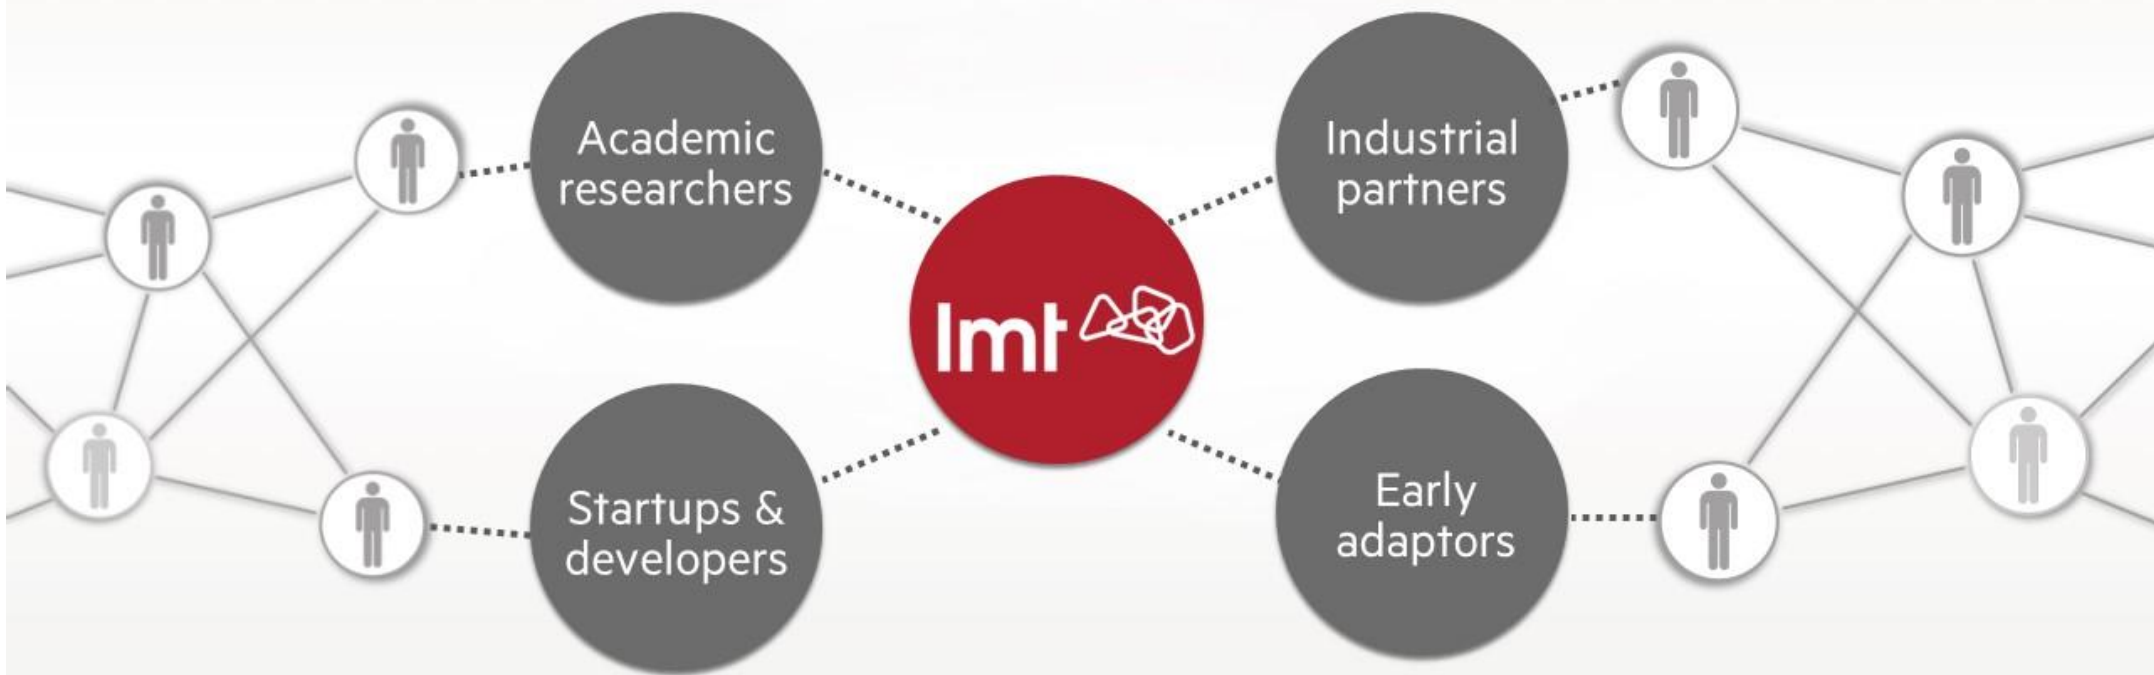

Distinguishing Characteristic

Imagining a possible new end using a given set of means

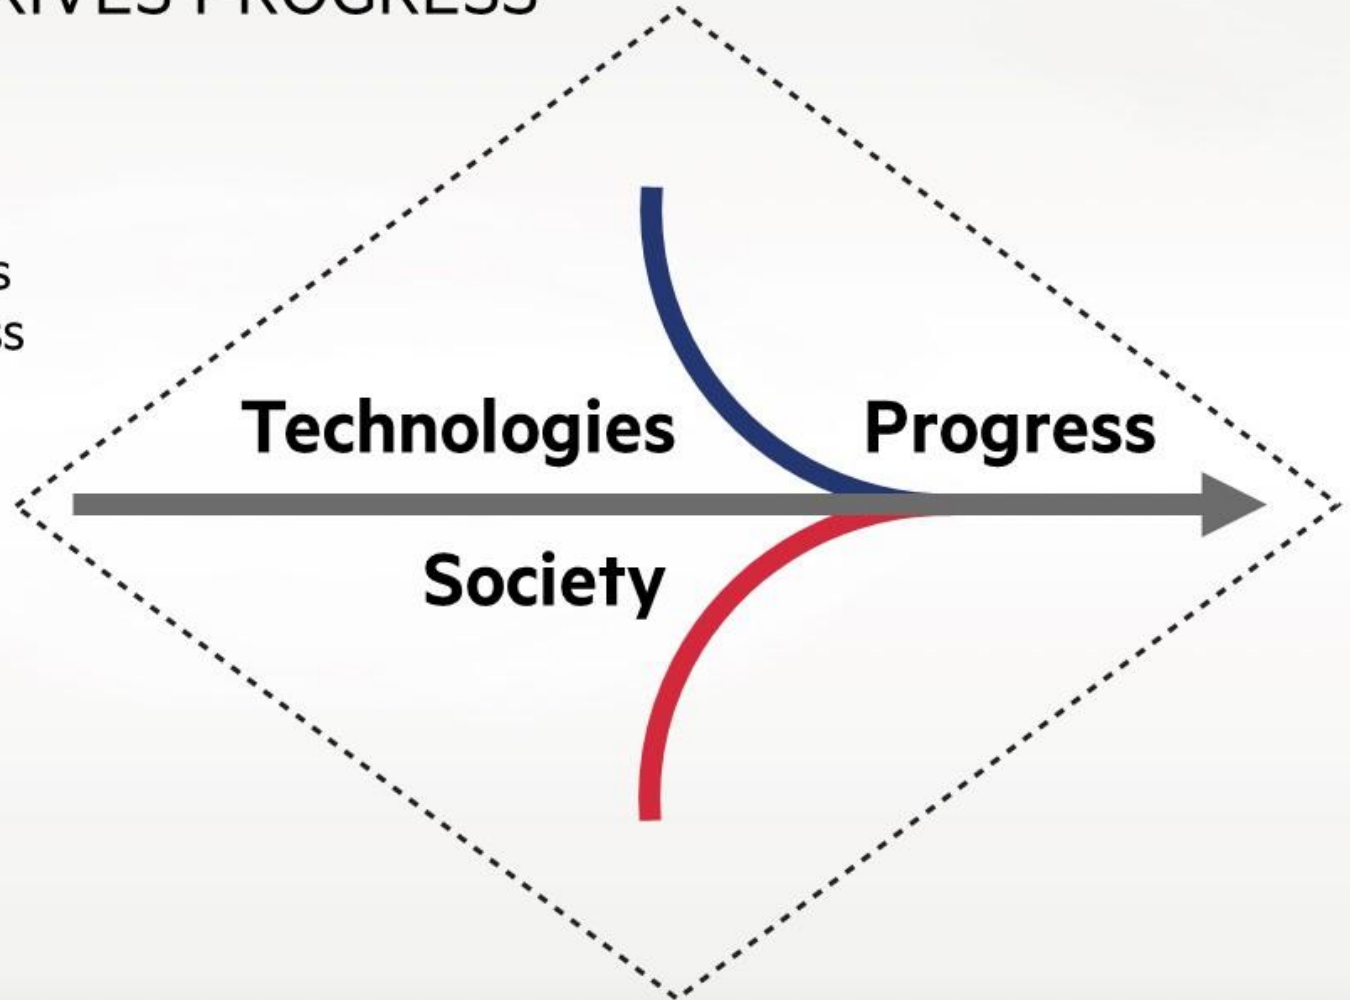

NETWORKING IN SEARCH FOR IDEAS AND SKILLS

COOPERATION DRIVES PROGRESS

Cooperation and symbiosis between society and technologies create and drive progress (and innovations)

lmt 

**THE FUTURE IS
MOBILE ONLY**
